ComputerSite Engineering, Inc.’s Consultants Personally Advise Data Center Managers at Design Charrette in October 2007

Santa Fe, NM, September 10, 2007 -- ComputerSite Engineering, Inc.[®] (*ComputerSite Engineering*), an engineering and management consulting firm affiliated with the Uptime Institute, Inc.[®] (*Institute*), will be integrally involved in the Design Charrette hosted by the *Institute* in Santa Fe, New Mexico, this fall. The event, which runs from October 28 through October 31, 2007, offers three “Tracks” examining issues related to electrical and mechanical infrastructure design and data center management, an EPA-led ENERGY STAR dinner and workshop, as well as a supplemental seminar on topics relevant to sustained availability.

As part of *ComputerSite Engineering*’s prominent sponsorship of the event, the firm’s team of renowned consultants will be on-hand to discuss data center planning and upgrades with Charrette attendees. Each of *ComputerSite Engineering*’s consultants come from a data center management background and include such industry experts as Pitt Turner, a Principal in the firm and the company’s acting President; Hank Seader; Terry Altom; Rick Schuknecht and Vince Renaud. Says Renaud of the team’s collective experience: “We understand the heartache of ownership and operation.”

According to Pitt Turner, a licensed engineer who often serves as a team leader during consulting engagements, “The data center industry is expecting more change in the next few years than in the past decade. The combination of technical and operational expertise at the Charrette presents a wonderful opportunity for participants to have direct one-on-one discussions with industry leaders and help shape what will impact us all.” He believes a discussion with his unbiased consultants can have actionable impact on Charrette attendees: “Once a data center is operational, management of the site separates the successful industry leaders from the other players. Participants in the Charrette’s management track will learn how it should be done and walk away with some practical tools and techniques.” For information on how to register to attend the Design Charrette, visit uptimeinstitute.org/charrette.

Consultant bios, white papers and more information about *ComputerSite Engineering*’s consulting services can be found at www.computersiteengineering.com or by contacting Julian Kudritzki, Director of Business Development and Operations at 505-946-5640 or jkudritzki@computersiteengineering.com.

About *ComputerSite Engineering*:

Independent of any Engineer-of-Record or manufacturer affiliation, *ComputerSite Engineering*’s consulting teams help clients develop and execute solutions that are responsive to their unique business needs. Since 1985, *ComputerSite Engineering* has guided and justified data center investments for major organizations that require high levels of continuous availability to conduct business. *ComputerSite Engineering*’s mission is to work with clients to ensure data centers are managed for uninterrupted uptime over sustained periods.
